Course Name: Ecosystems of Puerto Rico
Course Number: BIO 197
Credit Hours: 3 undergraduate

Course Objectives
Puerto Rico the smallest of the Greater Antilles is an island rich in natural resources and biodiversity. As other sub-tropical regions the Puerto Rican marine and terrestrial ecosystems are suffering the impacts of climate change, pollution, invasive species, habitat loss, and human population growth. Due to these factors, conservation and education programs have been developed all over the island to increase the awareness between citizens and visitors.

The program participants will have the opportunity to learn about the biodiversity of the island. Exploring the marine and terrestrial habitats of Puerto Rico, the students will gain a clear understanding of how those factors are affecting directly and indirectly these systems. Visiting and joining two of the conservation programs, the student will be aware of the importance of the environmental protection. Participant will experience the cultural exchange, while interacting with locals, especially with biology students of University of Puerto Rico.
